Old Hawleyville Rd

This map identifies land that is defined as prime farmland, locally important farmland soils, and soils of statewide importance. The map is prepared as a guide to identify the location and extent of prime farmland soils. Those lands may qualify for various state, federal, and private programs to promote and preserve farmland and the economic and social value of prime farmland. This map also identifies lands of statewide importance. Such lands are those that are essential to the state’s food supply and local economies. The map is not colorfast and may require reprints. For more information, please visit the CT DEP website.

DATA SOURCES

U.S. Department of Agriculture (USDA) NRCS

This map is based on the Soil Survey Geographic Database (SSURGO) 2003 data. The data is available on a CD-ROM from the Soil Survey National Data Management System (SSNDSMS) at http://www.nrcs.usda.gov. The maps, reports, and data are available for free at the National Soil Survey Center (NSSC) at http://www.nrcs.usda.gov.

LEGEND

Prime Farmland Soils are those soils that have the best combination of climate, topography, and soil properties that support high yields of high-value food crops. These soils also have the potential for producing crops that require high inputs. This map is prepared as a guide to identify the location and extent of prime farmland. These soils are currently certified as farmland or support a high level of agricultural activity.

Locally Important Farmland Soils are those soils that fail to meet one or more of the requirements of prime farmland but have the potential for producing crops that require high inputs. This map identifies land that is defined as locally important farmland. These soils support a high level of agricultural activity and are important to the local economy.

Soils of Statewide Importance are those soils that are essential to the state’s food supply and local economies. This map identifies land that is defined as soils of statewide importance. These soils are important to the state’s economy and provide a source of food for the state's residents.

EXPLANATION

The map uses a Lambert Conformal Conic Projection and is not colorfast. The map is not colorfast and may require reprints. For more information, please visit the CT DEP website.
