FARMLAND SOILS
NEW HARTFORD, CONNECTICUT

LEGEND
- Prime Farmland Soils: these soils that have the best characteristics for crop production and are available for those who need them most. These soils are found in areas that are well-drained, fertile, and have good water and air movement.
- Important Farmland Soils: these soils that are also available for those who need them most. These soils are found in areas that are well-drained, fertile, and have good water and air movement.
- Locally Important Farmland Soils: these soils that are also available for those who need them most. These soils are found in areas that are well-drained, fertile, and have good water and air movement.

EXPLANATION
This map shows the areas that are prime, important, and locally important farmland soils. These soils are valuable for crop production and are available for those who need them most.

DATA SOURCES
The data used to create this map comes from various sources, including U.S. Department of Agriculture-Natural Resources Conservation Service (USDA-NRCS), Connecticut Department of Agriculture, and Connecticut Agricultural Experiment Station.

This map is updated periodically to reflect changes in the farmland soils.
