Soils that are productive and may qualify for the Statewide Important Farmland designation.

**LEGEND**
- **Prime Farmland Soils**: soils that have the best combination of soil and topographic characteristics and are located on lands that are not farmed or are farmed in a manner that does not affect the farmland soil designation.
- **Secondary Important Farmland Soils**: soils that fall on or near one of the components of prime farmland soils and are located on lands that are not farmed or are farmed in a manner that does not affect the farmland soil designation.
- **Low Importance Farmland Soils**: soils that fall on or near one of the components of prime farmland soils and are located on lands that are farmed in a manner that may affect the farmland soil designation.

**DATA SOURCES**
- USGS 7.5 minute topographic quadrangle maps published between 1950 and 1990.
- Soil Survey Geographic Database (SSURGO) database produced of those lands that have productive soils. Those lands may qualify for the Statewide Important Farmland designation.

**EXPLANATION**
This map shows the location of farmland soils that are productive and may qualify for the Statewide Important Farmland designation. The map is based on USGS 7.5 minute topographic quadrangle maps published between 1950 and 1990 and the Soil Survey Geographic Database (SSURGO) database. These sources provide information on the soil and topographic characteristics of the lands. The map shows the location of farmland soils that are productive and may qualify for the Statewide Important Farmland designation.

**RELATED INFORMATION**
- Street names are from Tele Atlas copyrighted data. Base map imagery was purchased from the Town of Ledyard.
- The production of this map was supported by the Connecticut Department of Agriculture and the State of Connecticut.

**SCALE**
- Scale 1:24,000 when map is printed at original size (48 x 36 in).
