Prime Farmlands soils are those soils that have the best combination of physical and chemical characteristics for farmed. The farmland program (FRPP) which is reauthorized in the Food, Conservation, and Energy Act of 2008, provides assistance to farmers who manage soils with the best combination of physical and chemical characteristics to maintain the 1:24,000 scale (1 inch = 2000 feet). This map is intended to be printed at its original dimensions in order to maintain the 1:24,000 scale (1 inch = 2000 feet). This map does not necessarily portray land that is used currently for farmed. This map is not colorfast so soils data shown on this map. Visit the CT DEP website to order a map. The map is not colorfast so soils data shown on this map. Visit the CT DEP website to order a map.
