The soils were mapped at a scale of 1:12,000 with a minimum size product.  These soils are known for their high productivity and are highly valued for the production of high value foods, fibers, and oilseed crops.  The soils are underlain by a variety of parent materials, including glacial till, alluvial deposits, and bedrock.  The soils are well-drained and have a high level of organic matter, which makes them suitable for a variety of crops.

EXPLANATION

The farmland soils map is provided for information purposes only and should not be used for property development or investment decisions.  The soils map was produced by the Connecticut Department of Agriculture, Farmland Preservation Program, and is available for these uses.
