This map is prepared as a guide to identify the location and extent of soils that are most suitable land for producing food, feed, fiber, forage, and CFR title 7, part 657. It identifies the location and extent of the North American Datum of 1983 and the map was compiled using the 1987 soil survey report for the town of Shelton, Connecticut. This map does not incorporate current land use changes which may affect the farmland and designations.

DATA SOURCES

NRCS, Natural Resources Conservation Service. Farmland Soils. This map is based on soil survey data compiled by the NRCS, Natural Resources Conservation Service. The data was compiled by soil scientists and soil surveyors and is accurate to the best of their knowledge. The map is intended for use by Soil Conservationists, Soil Scientists, Landowners, Developers, and other interested parties. The map is not intended for legal use or for creating legal boundaries. This map is not intended to be a substitute for professional advice or for legal purposes. The map is not intended to be used for flood risk analysis or for creating flood risk maps.

LEGEND

Prime Farmland Soils: soils that have the best combination of good physical condition, fertility, and site factors, and are zoned for agriculture. These soils are highly productive and are currently in agricultural production.

Likely Farmland Soils: soils that have prime or good physical condition, fertility, and site factors, and are zoned for agriculture. These soils are highly productive and are currently in agricultural production.

Low-Impact Farmland Soils: soils that have the best combination of good physical condition, fertility, and site factors, and are zoned for agriculture. These soils are highly productive and are currently in agricultural production.

Low-Impact Farmland Soils: soils that have the best combination of good physical condition, fertility, and site factors, and are zoned for agriculture. These soils are highly productive and are currently in agricultural production.

EXPLANATION

This map provides a general overview of the soils in the town of Shelton, Connecticut. The map is based on soil survey data compiled by the NRCS, Natural Resources Conservation Service. The data was compiled by soil scientists and soil surveyors and is accurate to the best of their knowledge. The map is intended for use by Soil Conservationists, Soil Scientists, Landowners, Developers, and other interested parties. The map is not intended for legal use or for creating legal boundaries. The map is not intended to be a substitute for professional advice or for legal purposes. The map is not intended to be used for flood risk analysis or for creating flood risk maps.
