SOIL DATA - Soil map units shown on this map are from the 2007 and Energy Act of 2008 (Farm Bill) to protect working agricultural Program (FRPP) which is reauthorized in the Food, Conservation production of high value food, fiber or horticultural crops. farming practices.

This map does not incorporate current land use changes which may affect the land and designations.

DATA SOURCES

The map shows the location of soils used for various crops and the potential for use in agricultural production. The map also shows the location of soils used for forest and other land use purposes. The map is based on data from the NRCS and other government agencies, including the USDA and the EPA.

LEGEND

- Prime Farmland Soil: soils that have the best combination of physical, chemical, and biological properties and are well suited for a wide range of crop production.
- Important Farmland Soil: soils that have some of the same properties as Prime Farmland Soil, but are less well suited for crop production or are subject to degradation.
- Local Importance Farmland Soil: soils that have some of the same properties as Important Farmland Soil, but are subject to degradation.

EXPLANATION

The map shows the location of soils used for various crops and the potential for use in agricultural production. The map also shows the location of soils used for forest and other land use purposes. The map is based on data from the NRCS and other government agencies, including the USDA and the EPA.
