FARMLAND SOILS
WINDSOR LOCKS, CONNECTICUT

LEGEND
- Prime Farmland Soils: These soils that have the true potential and productivity for producing high value crops and high productivity feed, forage, fiber, and oil seed crops. This land may be important to the local economy due to its production of high value food, fiber or horticultural crops. Includes locally important farmland soils for the towns of Ashford, Canterbury, Chaplin, Simsbury, and Vernon.
- Important Farmland Soils: These soils that are more or less the equivalent of Prime Farmland Soils, that are not prime or statewide importance but are used for the production of high value food, feed, forage, fiber, and oil seed crops and are important to the local economy.
- Locally Important Farmland Soils: These soils that are not prime or statewide importance but are used for the production of high value food, feed, forage, fiber, and oil seed crops and are important to the local economy.

EXPLANATION
This map illustrates the potential productivity and potential significance of farmland. It indicates the relative potential productivity and potential significance of soils for agricultural production and for economic importance to the local economy. It identifies productive soils that are suitable to be used for farms. It distinguishes productive soils that are suitable to be used for farms. It identifies productive soils that are suitable to be used for farms.

DATA SOURCES
State Soil Map and Geologic Atlas, 1984. The map was based on the results of soil survey in the area. The map was published by the State Soil Survey Laboratory, University of Connecticut.

This map is intended for the purpose of illustrating the relative potential productivity and potential significance of farmland. It is not intended for use in land use planning or land evaluation.
