SOIL FLOoding CLASS
GOSHEN, CONNECTICUT

LEGEND

Very Frequent: Flooding is likely to occur very often under normal growth season conditions. The chance of flooding is more than 50 percent in any month of any year.

Frequent: Flooding is likely to occur often under normal growth season conditions. The chance of flooding is more than 50 percent in any month of any year.

Occasional: Flooding occurs infrequently under normal growth season conditions. The chance of flooding is more than 50 percent in any month of any year.

Rare: Flooding is unlikely to occur under normal growth season conditions. The chance of flooding is 1 in 30 years or less in any month of any year.

Not Rated: Such flooding characteristics that have very little information are located to the south. These areas are either land complexes or floodplains which are the most susceptible to changes occurring as conditions change at the site.

DATA SOURCES

DATA SOURCES - Soil susceptibility to flooding is the temporary inundation of an area and is affected by factors such as elevation, land use, and slope.

EXPLANATION

Soil susceptibility to flooding is the temporary inundation of an area and is affected by factors such as elevation, land use, and slope. Flooding in Goshen is common due to the presence of many wetlands and a network of streams. Flooding in Goshen is most likely to occur in the months of July, August, and September. The flooding is most likely to occur in the areas near the streams and wetlands.
