SOIL FLOODING CLASS
OXFORD, CONNECTICUT

LEGEND

Very Frequent - Flooding is likely to occur very often under normal weather conditions. The chance of flooding is more than 50 percent any year.
Frequent - Flooding is likely to occur often under normal weather conditions. The chance of flooding is approximately 15 percent any year.
Occasional - Flooding occurs only under abnormal weather conditions. The chance of flooding is about 2 percent any year.
Rare - Flooding is unlikely to occur under normal weather conditions. The chance of flooding is 0.1 percent or less any year.

SOIL FLOODING DATING - Based on data originally from the 1:24,000-scale U.S. Army Corps of Engineers, the soil flooding data was updated to the 2013 boundary. Current soil flooding data were updated as of 2023.

EXPLANATION

Soil susceptibility to flooding is the temporary inundation of an area due to the accumulation of surface water. Flooding, often referred to as "flood" or "floodplain," is a natural occurrence that affects the landscape. Floods can be caused by a variety of factors, including heavy rainfall, snowmelt, and river flooding, among others.
