Hydric Soils
ANDOVER, CONNECTICUT

LEGEND

- Hydric Soil
- Natural conditions: soils that formed under hydric conditions, as defined by the U.S. Department of Agriculture. These soils are identified by their unique properties and are subject to special management practices.

Not Rated:
- Sites that do not meet the criteria for hydric soils. These sites may be wetlands, but do not have all the characteristics required to be classified as hydric soils.

EXPLANATION

This map is prepared as a guide to identify the general location of hydric soils in Andover, Connecticut. Hydric soils are those that formed under conditions that support hydrophytic vegetation, unique to hydric soils. They are identified by their unique properties and are subject to special management practices.

DATA SOURCES

See the US Department of Agriculture National Resources Conservation Service for more information.

A combination of the hydric soil, hydrophytic vegetation, and unique to hydric soils have been established. This map is prepared as a guide to identify the general location of hydric soils in Andover, Connecticut.
