HYDRIC SOILS
BETHANY, CONNECTICUT

LEGEND

Hydric Soils
- These soils have flooded under natural conditions long enough to develop the physical characteristics that are diagnostic of a hydric soil.

Non-Rating
- soils that formed under natural conditions, flooding, or pedogenic conditions that failed to develop the physical characteristics diagnostic of a hydric soil.

EXPLANATION

The map contains a guide to identify the potential locations of hydric soil areas in Bethany, Connecticut. It includes political boundaries, railroads, airports, and other features required to determine soil conditions present at the site.

DATA SOURCES

The map was developed using data from various sources, including soil survey reports, aerial photography, and other relevant information. The data was processed and compiled by the Natural Resources Conservation Service (NRCS) and the U.S. Department of Agriculture (USDA).

For specific details and further information, please contact the NRCS office or visit their website (www.ct.nrcs.usda.gov).
