HYDRIC SOILS
EASTON, CONNECTICUT

LEGEND

- Hydric Soils: Soils that have been inundated by ground water, standing, or pooling long enough during the growing season to limit drainage. Flooding or ponding is required to determine soil conditions present at the site.

Not Rated: soils that have not been inundated or otherwise saturated long enough during the growing season to limit drainage. Other conditions, such as acid soils, are not considered to be required to determine soil conditions present at the site.

EXPLANATION

This map was created to identify the general location of hydric soils on a specific site. Visit the CT DEP website to view the soil conditions of the site.

DATA SOURCES

- Source Agency: U.S. Department of Agriculture
- Scale: 1:24,000 (3" = 1 mile)
- Base Map Data: This map shows the general location of hydric soils.
- Soil Map Data: This map indicates the soil class and color.
- Other Data: This map includes roads, streams, and other features.

The map is intended to be used as a guide to identify the general location of hydric soils. Additional information, such as soil conditions, may be required to determine soil conditions present at the site.

SOIL DATA - Soil map units shown on this map are from the 2007 saturated or inundated long enough during the growing season to limit drainage. Flooding, or ponding long enough during the growing conditions of saturation, flooding, or ponding hydric soils on a specific site.

This map is prepared as a guide to identify the general location of hydric soils data shown on this map. Visit the CT DEP website to view the soil conditions of the site.
