HYDRIC SOILS
GROTON, CONNECTICUT

LEGEND

Hydric Soil — Those soils that formed under conditions of regular or frequent saturation and meet the specific hydric soil criteria at the time of soil survey and study. They must also meet one of the specific hydric criteria.

Not Hydric — All other soils that do not meet the specific hydric soil criteria. These soils may be wet under field

EXPLANATION

The map shown is a guide to the position, extent, and nature of the Hydric Soils in the study area. It is based on field observations, aerial surveys, and or available historical data. The soils are in areas that meet the definition of Hydric Soils, but may not be mapped because of either topographic relief or urbanization. The map is intended to guide further study, but does not contain all of the Hydric Soils present in the area.

DATA SOURCES

Soil survey data (B.W. Dyer), aerial photographs (State of Connecticut), and other available data (e.g., historical soil surveys). The map is intended to guide further study, but does not contain all of the Hydric Soils present in the area. It is not to be used for regulatory purposes or as a title or survey record.

The CT ECO website is a valuable resource for information about Hydric Soils in Connecticut.

Map created by the Soil Survey Staff, NRCS, U.S. Department of Agriculture, 2023.
