The soils were mapped at a scale of 1:12,000 with a minimum size of 2 acres. The soils are described and mapped as follows:

- Open Sites
- River, Brook, Stream
- Town Boundary
- County Boundary
- Interstate Highway
- U.S. Route
- State Route
- Roadway
- Rail

**LEGEND**

**DATA SOURCES**

**EXPLANATION**

The map is designed to display the current distribution of soils in the area, with open sites and water bodies clearly marked. The soils are categorized based on their hydrological characteristics, which are important for conservation planning, and assessment of potential wildlife habitat.
