Organics are materials deposited from decaying vegetation and water movement throughout, but very low available water making it very droughty.

Lodgement Till: Lodgement Till is material deposited directly beneath the glacier. It is less consolidated and friable than lodgement and water movement throughout, but very low available water making it very droughty.

This map is intended to be printed at its original dimensions in SCALE 1:24,000 when map is printed at original size (48 x 36 in)
