State Hwy 114 - The soil depth to bedrock ranges from 20 to 40 inches.

Organics are materials deposited from decaying vegetation and accumulate in the surface layers of the soil. Since the organic materials can be very high in water and nutrient content, they support diverse vegetation that thrives on the organic materials.

Deep Organic - Inland - Beneath the glacier slowly melts away. It is less consolidated and friable than lodgement till.

Lodgement Till - Lodgement till is a material deposited directly beneath the glaciers underglacial and subglacial layer. It is the parent material of the material into which the glacier grinds. The compact or dense layer beneath the flow of air and water overcame, producing a relatively impermeable barrier for water to move.

Urban Infiltrated - Urban infiltrated refers to materials that show evidence of water flow due to the infiltration of water.
