Forest Pond

Alluvial or floodplain deposits are transported by streams.

Melt-out till is material deposited as the ice melts away. The soil depth to bedrock ranges from 20 to 40 inches.

Glaciofluvial material has been transported by moving water from melting ice. The soil depth to bedrock ranges from 20 to 40 inches.

Soil parent material: The soil material, usually gravelly, well-sorted sand and gravel, has very high air and water movement throughout, but very low available water capacity. The depth of the organic materials is 16 to 51 inches.

Soil depth to bedrock ranges from 20 to 40 inches.

USGS 7.5 minute topographic quadrangle maps published between 1946 and 1986 delineate three acres. Enlargement of this map beyond the 0.5 square miles is neither current nor complete.
