Delineation of three acres. Enlargement of this map beyond the city limits will meet Connecticut and local health code regulations. Soil surveys of septic systems are conducted to determine system design and site preparation to overcome. Designs of these systems require extensive design and site preparation. A subsurface sewage disposal system, commonly referred to as a residential septic system, that does not meet health code regulations may not be installed for a new development. Soil survey data is maintained on the 1:24,000 scale map for the city of Burlington, Connecticut. The map does not show all the soils which could potentially affect the installation of a subsurface sewage disposal system. The map should not be used for the installation of any system without additional verifications.
