AQUIFER PROTECTION AREAS
Bloomfield, CONNECTICUT

EXPLANATION

The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection, is a partnership between federal, state, and local governments to protect Connecticut's high-priced public water supply and other groundwater resources. Water suppliers produce and sell water to the public through different methods, and they need to ensure that the water they sell is safe to drink. To do this, they need a high-quality water supply and a protected source area that is free from contamination.

The aquifer protection area information can be used to identify areas that need protection and to evaluate the effectiveness of existing protection measures. For example, the aquifer protection area information can be used to determine the areas that need to be protected by implementing new protection measures. The aquifer protection area information can also be used to evaluate the effectiveness of existing protection measures. The aquifer protection area information can be used to identify areas that need protection and to evaluate the effectiveness of existing protection measures.

DATA SOURCES

AQUIFER PROTECTION AREA DATA - Aquifer Protection Areas data are included in the Aquifer Protection Areas dataset. This dataset includes all aquifer protection areas in Connecticut. The data are stored in a digital format and are available for download from the Connecticut Department of Energy & Environmental Protection.

MASSACHUSETTS WELLHEAD PROTECTION DATA - The Massachusetts Wellhead Protection Area database is available for download from the Massachusetts Department of Public Health. This dataset includes all wellhead protection areas in Massachusetts.

SHORELAND WELLHEAD PROTECTION DATA - The Shoreland Wellhead Protection Area database is available for download from the Vermont Department of Environmental Conservation. This dataset includes all wellhead protection areas in Vermont.
