AQUIFER PROTECTION AREAS
DANBURY, CONNECTICUT

EXPLANATION
The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection (DEEP), uses findings from the Connecticut groundwater flow model and the State of Connecticut's high-resolution digital database of ground water supply and sewer systems to identify groundwater protection areas in towns that may affect the quality of ground water. These areas are delineated on the map to ensure that the drinking water supply is protected from contamination.

DATA SOURCES
AQUIFER PROTECTION AREA DATA - Aquifer Protection Areas delineated on the map are based on the Aquifer Protection Area digitized data which correspond to the legend described in Section 13.0. Ground water protection areas are delineated in accordance with the requirements of Section 13.0. The data are based on the DEEP regional ground water model and the hydrostratigraphic units. The data are not intended for any purpose other than the delineation of the ground water protection areas.

PROTECTIVE AREAS DATA - The level B aquifer protection area information can be used by municipalities to understand the physical characteristics of the ground water flow system. The map shows the locations of the protective areas within the state. The information includes polygons and a map of the ground water flow system.

This information does not include additional information such as the number of residents or other demographic data.

MAP LOCATION
Map created by DEEP
