AQUIFER PROTECTION AREAS
Ledyard, CONNECTICUT

EXPLANATION

The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection, is a management program focused on protecting Connecticut's high-quality public water supply and natural resources. The program includes the development of Aquifer Protection Areas (APAs) through regulations and the establishment of rules to protect and maintain the quality of public water supply sources for public water systems. The program aims to ensure that areas with significant water resources are protected against contamination.

DATA SOURCES

AQUIFER PROTECTION AREA DATA - Aquifer Protection Area digital data, which contains data that is derived from the U.S. Geological Survey (USGS) National Aquifer Characterization Database, which contains groundwater characterization data. The program also includes data from the State of Connecticut's Department of Environmental Protection (DEEP) and other local and state agencies.

MARSHALL WILDLIFE PROTECTION DATA - The Massachusetts Wildlife Protection Areas (WPAs) were established by the Massachusetts Department of Environmental Protection to protect and preserve wildlife and their habitats.

SHORELINES WILDLIFE PROTECTION DATA - The Rhode Island Wildlife Protection Areas (WPAs) were established by the Rhode Island Department of Environmental Management to protect and preserve wildlife and their habitats.

The information provided in this map is intended to support the development of the Aquifer Protection Program and is not a substitute for legal or regulatory advice. Users should consult with appropriate legal and regulatory authorities before using the information in this map.

This map is intended to provide an overview of the Aquifer Protection Areas and other relevant data. Users should consult with appropriate legal and regulatory authorities before using the information in this map.
