The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection, protects the state’s high-yield public water supply wells from contamination by DEEP, municipalities and the towns that contain them. This information is intended to be used to depict aquifer protection areas, sometimes called wellhead protection areas, which may be shown on this map. Additional information about wellhead protection in Massachusetts is available from massgis. MassGIS, the state’s primary GIS program, provides geographic information systems (GIS) services to state agencies and customers. The information was published on December 4, 2012. More information about wellhead protection in Rhode Island is available from RIGIS, the state’s primary GIS program, provides geographic information systems (GIS) services to state agencies and customers. The information was published on December 4, 2012. More information about wellhead protection in Rhode Island is available from RIGIS, the state’s primary GIS program, provides geographic information systems (GIS) services to state agencies and customers.
