AQUIFER PROTECTION AREAS
Plainfield, CONNECTICUT

LEGEND
Level A Aquifer Protection Area (Final Adopted)
Level B Aquifer Protection Area (Final)
Level II Aquifer Protection Area (Provisional)

EXPLANATION

The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection (DEEP) and the First Selectmen of the Towns of Connecticut, is the principal state authority for protecting the quality of groundwater and the environment within those areas.

The Aquifer Protection Program’s primary objective is to identify areas with significant aquifer potential that require protection to maintain the quality and quantity of groundwater resources. This includes protection of areas surrounding public water supply wells, which are critical for drinking water supplies.

MAPS AND DIGITAL DATA - Go to the CT ECO website for the digital spatial data shown on this map. For the most up-to-date mapping, visit the DEEP website for the digital spatial data shown on this map.

DATA SOURCES

AQUIFER PROTECTION AREA DATA - Aquifer Protection Area digital data which corresponds with the map is available from DEEP.

AQUIFER PROTECTION AREA DATA (Level II) - The purpose of the Level II Aquifer Protection Areas is to provide preliminary information about aquifer characteristics in the state. These areas are not approved by DEEP and are not final. For final approval, visit the DEEP website for the digital spatial data shown on this map.

REVIEWED AND APPROVED DATA - Go to the CT ECO website for the most up-to-date information about the Aquifer Protection Program and the aquifer protection areas.

DEEP website for the digital spatial data shown on this map. For the most up-to-date mapping, visit the DEEP website for the digital spatial data shown on this map.

This map is intended to be presented on its original dimensions in order to maintain the 1:24,000 scale (1 inch = 2000 feet).

AQUIFER PROTECTION PROGRAM - Visit DEEP website for more information on the Aquifer Protection Program and the aquifer protection areas.

DEEP may adjust Final area boundaries to be updated as Final area mapping replaces earlier preliminary digital datasets which require water companies to complete both regulating land use within those areas. Once mapped, the Aquifer Protection Program, administered by the DEEP, will enforce the Final area boundaries with the same regulatory standards used in the Level II aquifer protection areas.

This information does not include protection areas for surface water supplies or areas regulated by DEEP for the protection of soil, surface waters, or wetlands. This information is intended to identify areas where groundwater quality may be affected by specific activities, such as land use and construction.

This information does not include protection areas for surface water supplies or areas regulated by DEEP for the protection of soil, surface waters, or wetlands. This information is intended to identify areas where groundwater quality may be affected by specific activities, such as land use and construction.

The Aquifer Protection Program's primary objective is to identify areas with significant aquifer potential that require protection to maintain the quality and quantity of groundwater resources. This includes protection of areas surrounding public water supply wells, which are critical for drinking water supplies.
