The Aquifer Protection Program, administered by the Connecticut Department of Energy & Environmental Protection, protects high-quality public water supplies in the state by preserving aquifers. The program documents data, examines the state’s water supplies, manages surface and ground water resources, and establishes designated areas within the state to protect these resources. This information is intended to be used in its raw state from the Aquifer Protection Program’s data. The program’s data is regularly updated and includes data from various sources and contributes to the understanding of the aquifer systems. The data is provided for educational and research purposes and is subject to the regulations of the state. The program’s data is intended to be used for educational and research purposes and is subject to the regulations of the state.
