This map shows the natural and artificial drainage basins in Bristol, Connecticut. The map includes major, regional, and subregional drainage basin boundaries. Drainage basin areas are shown on this map. The major, regional, and subregional drainage basin boundaries are created on a Geographic Information System (GIS) using existing data from the United States Geological Survey (USGS), the United States Environmental Protection Agency (USEPA), and the Connecticut Department of Environmental Protection (DEP). The map is created in the Lambert Conformal Conic Projection and is maintained at a scale of 1:24,000 (1 inch = 2000 feet).

The major basin, regional basin, subregional basin, and outlet names are shown on the map. The map includes all major, regional, and subregional drainage basin areas shown on this map. Drainage basin areas are shown on this map. The map includes all major, regional, and subregional drainage basin areas shown on this map. Drainage basin areas are shown on this map. The map includes all major, regional, and subregional drainage basin areas shown on this map. Drainage basin areas are shown on this map.
