Drainage basin boundaries shown on this map were manually represented by closely spaced contour lines. Contour lines that cross the shape of the land surface depicted by the contour lines shown on this map are intended to show areas of slope and are not intended for exact determinations of elevation. Drainage basin boundaries shown on this map are not intended for exact determinations of elevation.

EXPLANATION

DATA SOURCES

NATURAL DRAINAGE BASINS
MAJOR, REGIONAL, SUBREGIONAL AND LOCAL
CORNWALL, CONNECTICUT

The major regional basin is part of regional basin 43, which is part of major basin 4.

| Connecticut LiDAR dataset for 2000, which captured ground
| BASE MAP DATA - Based on data originally from 1:24,000-scale topographic surveys, 1955-1973, updated to 1999 using 1:24,000-scale topographic surveys, 1979-1999. The 1:24,000-scale topographic map was then converted to a 1:12,000-scale base map using a deskriptor-
| Drainage basin boundaries shown on this map were manually represented by closely spaced contour lines. Contour lines that cross the shape of the land surface depicted by the contour lines shown on this map are intended to show areas of slope and are not intended for exact determinations of elevation. Drainage basin boundaries shown on this map are not intended for exact determinations of elevation.

Figure 1 - Example showing a graphical drawing from another submerged regional subregional drainage basin is part of 4302-02.

The following sources were used to create this map:

- Connecticut LiDAR dataset for 2000, which captured ground
- BASE MAP DATA - Based on data originally from 1:24,000-scale topographic surveys, 1955-1973, updated to 1999 using 1:24,000-scale topographic surveys, 1979-1999. The 1:24,000-scale topographic map was then converted to a 1:12,000-scale base map using a deskriptor-
- Drainage basin boundaries shown on this map were manually represented by closely spaced contour lines. Contour lines that cross the shape of the land surface depicted by the contour lines shown on this map are intended to show areas of slope and are not intended for exact determinations of elevation. Drainage basin boundaries shown on this map are not intended for exact determinations of elevation.
