9. 2000 U.S. Coast

EXPLANATION

The map shows the major and sub-regional drainage basins of Granby, Connecticut. Drainage basins are delineated by interpreting the 10-foot contour lines and hydrography. Local basins make up larger sub-regional, regional, and local basin drainage areas and boundaries. These data depict drainage areas for Connecticut State Plane Coordinate System of 1983, Zone 3526, at 1:24,000-scale. These data depict drainage areas for Connecticut regional, sub-regional, and local basin drainage areas and boundaries. The drainage basin boundaries shown on the map are based on USGS topographic quadrangle maps at 1:24,000 scale. All data were created by CT DEP and depict major, regional, and local basin drainage areas and boundaries. The information shown on this map is based on the following digital datasets:

- CT DEM
- USGS topographic maps
- Connecticut DEP data

DATA SOURCES

- CT DEM - Based on the original 1:24,000 scale of the U.S. Geological Survey quadrangle maps
- USGS topographic maps
- Connecticut DEP data

NOTES

- All data were created by CT DEP and depict major, regional, and local basin drainage areas and boundaries. The drainage basin boundaries shown on the map are based on USGS topographic quadrangle maps at 1:24,000 scale. All data were created by CT DEP and depict major, regional, and local basin drainage areas and boundaries. The information shown on this map is based on the following digital datasets:

- CT DEM
- USGS topographic maps
- Connecticut DEP data
