are the major, regional and subregional basin numbers for local basin purposes. It is not intended for exact determinations of elevation or slope.

The map shows the major and subregional areas of the state. The data used to create this map were obtained from various sources, including the U.S. Geological Survey, the Connecticut Department of Environmental Protection, and private companies.

The data sources are as follows:

Government and Private Sources
- U.S. Census BLS
- Federal, State, and Local Agencies
- Private Surveyors

Data Sources
- U.S. Geological Survey
- Connecticut Department of Environmental Protection
- Private Surveyors

The data was compiled and digitized by the University of Connecticut's CLEAR program. The map was created using ArcGIS software. The map is intended for educational and research purposes and should not be used for legal or engineering purposes.

Figure 1. Example showing a physical drainage basin and a subbasin. A subbasin boundary is part of the drainage basin.
