The map shows the boundaries and approximate area of major, regional, subregional, and local natural drainage basins in Portland, Connecticut. The basins are differentiated by their drainage identification numbers, which are hierarchical. Local basins make up larger subregional, regional, and national basins. However, some inaccuracies remain, and the data should be used with caution.

DATA SOURCES:
- U.S. Geological Survey data: The data used to create this map were obtained from the U.S. Geological Survey. The survey was conducted in 1981, and the map was based on the Digital Elevation Model (DEM) created by the Connecticut Department of Environmental Protection (CT DEP). The DEM was based on the National Elevation Dataset (NED) and was edited to fill in data gaps with information from contour lines on USGS 1:24,000-scale topographic maps.

EXPLANATION:
