The map shows the natural and administrative boundary of the Natural Drainage Basins. The major, regional, and subregional drainage basin boundaries are represented by closely spaced contour lines. Contour lines that cross the lay of the land can be ascertained. Gentle slopes are delineated.

The major, regional, and subregional drainage basin boundaries correspond to the river basins established by the United States Geological Survey. New York, New Jersey, and Michigan. Various city, county, and state government agencies supplemented this information. These agencies maintain detailed maps, aerial photos, and other data that are regularly updated to reflect changes due to urbanization, development, and other actions. Contour lines that cross the lay of the land can be ascertained. Gentle slopes are delineated.
