The map shows the natural and simplified form of drainage basins in Windham, Connecticut. These two datasets were developed by CT DEP and depict major, regional, and subregional drainage basin boundaries, outlet, and other drainage features shown on USGS 1:24,000-scale topographic quadrangle maps published between 1890 and 2007. The major, regional and subregional drainage basin boundaries delineated on the map are the same as those published on the 1:125,000-scale state map entitled Natural Drainage Basins in Connecticut, shown on this map are the same as those published on the 1:125,000-scale state map entitled Natural Drainage Basins in Connecticut.

The contour lines shown on this map are based on information from a statewide shape of the land surface depicted by the contour lines shown on this map. These contour lines are more accurate to maintain the 1:24,000 scale (1 inch = 2000 feet).
