

NATURAL DRAINAGE BASINS

MAJOR, REGIONAL, SUBREGIONAL AND LOCAL WINDSOR LOCKS, CONNECTICUT

LEGEND

- Basin Boundary**
 - Major Basin
 - Regional Basin
 - Subregional Basin
 - Local Basin
- Local Drainage Basin Direction**
 - Outlet Direction
 - Main Stem Direction
 - Coastal Direction
- Elevation**
 - 100 ft Contour Line
 - 20 ft Contour Line

EXPLANATION

This map shows the location and identification number of major, regional, subregional, and local drainage basins. It is intended to serve as a general guide for drainage basin boundaries and basin identification. Local basins are larger subregional, regional, and major drainage basin areas and are differentiated by their drainage basin boundary type and identification numbers. Arrows on the map represent general direction of surface water flow within local drainage basins. Local outlet direction is shown in purple. Main stem direction is shown in red. Coastal direction is shown in blue.

The elevation contour lines shown on this map are more accurate than those used in the basin boundaries. The drainage basin areas are numbered sequentially from west upstream and downstream. The identification numbers are as follows: The first digit (column 1) identifies the major basin, the first two digits (columns 1-2) identify the regional basin, the first 4 digits (columns 1-4) identify the subregional basin, and the first seven digits (columns 1-7) identify the local basin. Examples of basin numbers are the major, regional and subregional basin numbers for local basin number 4302-02. As illustrated in the diagram below, this signifies that local basin number 4302-02 is part of subregional basin 4302, which is part of regional basin 43, which is part of major basin 4.

Drainage basin boundaries shown on this map were manually delineated by interpreting the 10 foot contour lines and hydrography features shown on USGS 1:24,000-scale topographic quadrangle maps. Only drainage basins with a surface area greater than 1 square mile were delineated. It was not possible to verify the location of these basin boundaries. The boundaries may not be accurate in areas that have been dredged for flood control, upland wetland and reservoirs having outlets into two basins, areas where topographic mapping is not up to date, is inaccurate, or is not detailed enough to adequately define local drainage. Residential and

commercial development, highway construction, and other changes to the landscape may have resulted in local modifications to the natural drainage pattern since the time these basin boundaries were delineated.

The elevation contour lines shown on this map are more accurate than those used in the basin boundaries. The drainage basin areas are numbered sequentially from west upstream and downstream. The identification numbers are as follows: The first digit (column 1) identifies the major basin, the first two digits (columns 1-2) identify the regional basin, the first 4 digits (columns 1-4) identify the subregional basin, and the first seven digits (columns 1-7) identify the local basin. Examples of basin numbers are the major, regional and subregional basin numbers for local basin number 4302-02. As illustrated in the diagram below, this signifies that local basin number 4302-02 is part of subregional basin 4302, which is part of regional basin 43, which is part of major basin 4.

Note: The major, regional, subregional, and local drainage basin boundaries shown on this map are the same as those published on the 1:125,000 scale sheet entitled Natural Drainage Basins in Connecticut, McElroy, 1981. The basin boundaries shown on this town map were digitized from the 1:24,000-scale compilation sheets used to publish the state map of Natural Drainage Basins in Connecticut, 1981.

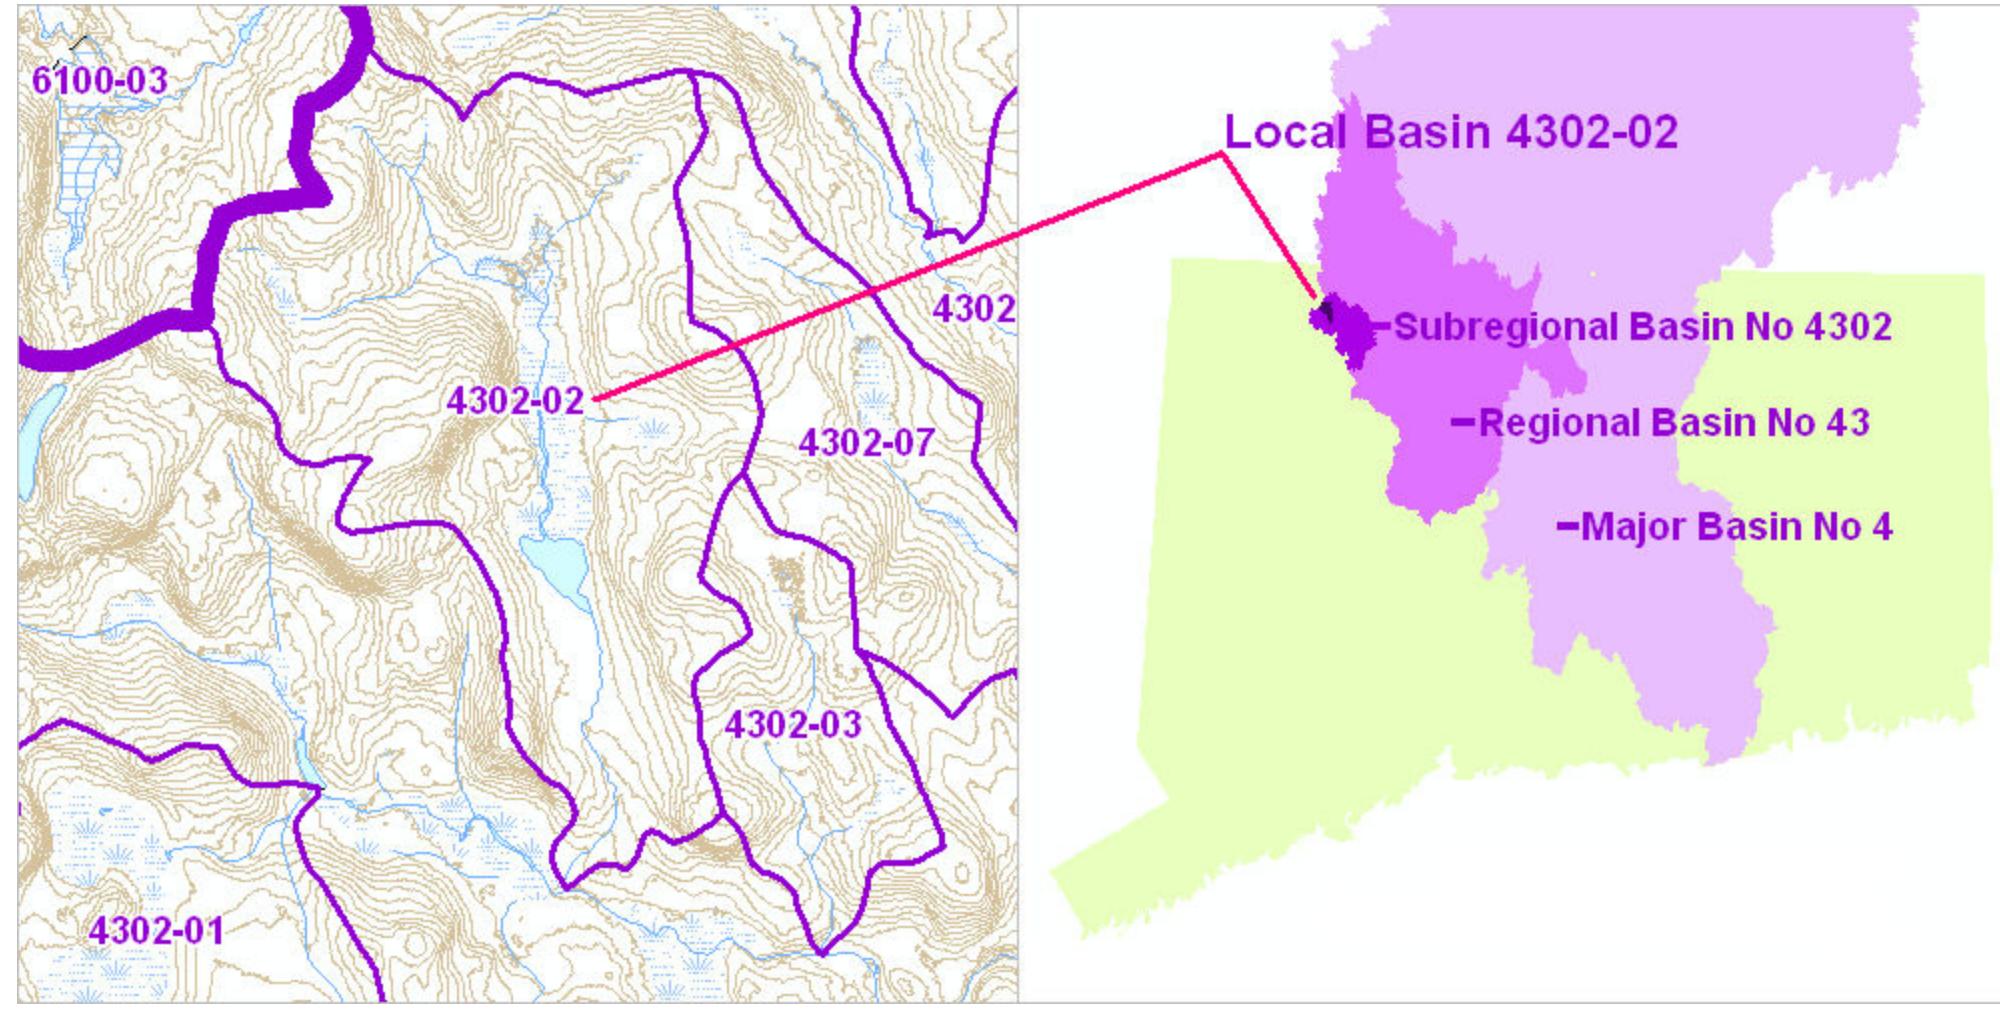

Figure 1. Example showing a typical local drainage basin and the subregional, regional, and major drainage basin it is part of.

DATA SOURCES

LOCAL DRAINAGE BASIN DATA The drainage basin information shown on this map is based on the following digital spatial datasets: Connecticut Local Basin Line and Local Basin Poly. These datasets were developed by CT DEP and delineate major, regional, subregional, and local drainage areas based on USGS 1:24,000-scale 7.5 minute topographic quadrangle maps prepared by the USGS between 1969 and 1984.

BASE MAP DATA Based on data originally from 1:24,000-scale USGS 7.5 minute topographic quadrangle maps published between 1969 and 1992. It includes political boundaries, railroads, airports, hydrography, geographic names and geographic places. Streets and street names are from Tele Atlas® copyrighted data. Base map information is neither current nor complete.

RELATED INFORMATION

This map is intended to be printed at its original dimensions in order to maintain the 1:24,000-scale (1 inch = 2000 feet).

To identify either all upstream basins draining to or all downstream basins from a particular location, refer to the Gazetteer of Drainage Basin Areas in Connecticut, Nasel, 1977; CT DEP Water Resources Bulletin 15, for the hydrologic sequence, headwater to outfall, of drainage basins.

MAPS AND DIGITAL DATA Visit the CT ECO website for this map and a variety of others in PDF format. Visit the CT DEP website to download the digital spatial data shown on this map.

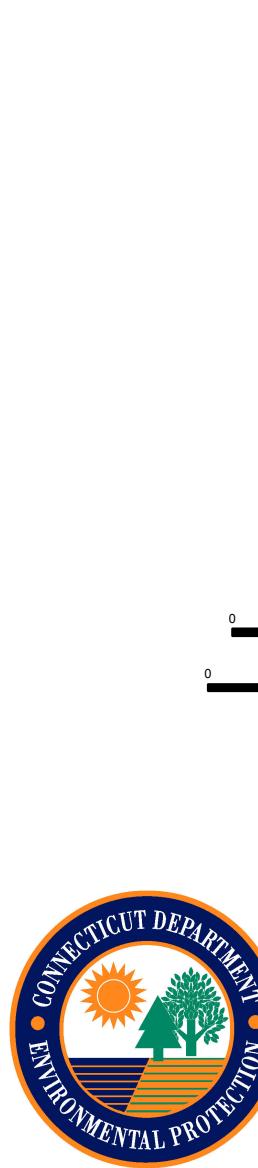

MAP LOCATION

State Plane Coordinate System of 1983, Zone 18NS
Lambert Conformal Conic Projection
North American Datum of 1983

SCALE: 1:24,000 (1 inch = 2000 feet) when map is printed at original size (48 x 36 in)
