EXPLANATION

The map shows the northern and southern extent of local drainage basins. It highlights the major, regional, subregional, and local basins in Woodbridge, Connecticut. The map is intended for public consultation, but the data is not current and should not be used for legal purposes. It is not intended for exact determinations of elevation or for any engineering or surveying purposes. The map is based on data collected through various sources, including the U.S. Geological Survey (USGS) and other federal, state, and local agencies. The map is a useful tool for understanding the drainage patterns and hydrologic connections within the area. However, changes in land use, vegetation, and other factors may affect the accuracy of the data over time. Users are encouraged to consult more recent and detailed maps for specific information.

DATA SOURCES

USGS NATIONAL DATA - The data was created using USGS data, which includes topographic maps, aerial photography, and other sources. The data was compiled and processed by the University of Connecticut.

ILLUSTRATION OF MAPPING DATA - The data was compiled and processed by the University of Connecticut.

MAP AND GRAPHIC DATA - The data was compiled and processed by the University of Connecticut.

NOTE: The map is intended for public consultation only. It is not intended for engineering or surveying purposes. The data is not current and should not be used for legal purposes. The map is a useful tool for understanding the drainage patterns and hydrologic connections within the area. However, changes in land use, vegetation, and other factors may affect the accuracy of the data over time. Users are encouraged to consult more recent and detailed maps for specific information.
