EXPLANATION

This map shows the natural and developed features of Bloomfield, Connecticut, including the natural drainage basins. The basins are color-coded to represent major, regional, subregional, and local basins. The drainage basins are delineated using digital data, and the map includes the location of the basins within the region.

DATA SOURCES

The data sources for this map include geographic information system (GIS) data, aerial photography, and other digital and hardcopy data. The map was created using software and techniques to ensure accuracy and detail. The map is a valuable resource for understanding the natural drainage patterns and the development of the area.

The map was created by the Connecticut Department of Environmental Protection (CT DEP) and is part of their environmental protection efforts. It includes information on political boundaries, railroads, airports, and other features to provide a comprehensive view of the area.

The map is useful for planning and development, as well as for educational and research purposes. It can be accessed through the CT DEP website for additional information and resources.
