This map shows the delineation of water flow on a natural watershed basin within the state of Connecticut. The basins were delineated using 1:24,000-scale U.S. Geological Survey (USGS) topographic maps from 1969 to 1984. Drainage basins are delineated by interpreting the 10-foot contour lines and hydrography shown on these maps. These data depict drainage areas for Connecticut and are numbered sequentially beginning upstream and proceeding downstream.

The drainage basin areas shown on this map are based on the following digital data:
- **LOCAL DRAINAGE BASIN DATA**

**EXPLANATION**

- **DATA SOURCES**

  - This map is based on the original soil survey data for the state of Connecticut. The soil surveys were conducted by the U.S. Department of Agriculture, Soil Conservation Service, and the Connecticut Agricultural Experiment Station.
  - The drainage basin areas were delineated using 1:24,000-scale USGS topographic maps from 1969 to 1984.

**PROTECTED AREAS**

- The data used to create this map are protected from light and moisture.

**DATA CREATION**

- The map was created by the Connecticut Department of Energy and Environmental Protection (CT DEP). The map was printed at its original dimensions in order to maintain the integrity of the data.
