These two datasets were developed by CT DEP and depict major, LOCAL DRAINAGE BASIN DATA – The drainage basin wetland and reservoirs having outlets into two basins, areas where stem direction is shown in red. Coastal direction is shown in blue.

DATA SOURCES

Task 3-2-3f 5. Coastal sea level rise. Areas expected to be affected by coastal sea level rise are shown in red. The red lines represent the anticipated 5 ft rise in sea level, the green lines represent the anticipated 10 ft rise in sea level, and the blue lines represent the anticipated 20 ft rise in sea level. These lines are based on the anticipated sea level rise in feet.

LEGEND

- Major Basin
- Regional Basin
- Subregional Basin
- Local Basin

EXPLANATION

This map shows the locations and drainage network of natural wetlands and reservoirs in the Darien area. The major drainage basins are differentiated by their drainage information. The map is designed to help understand the natural drainage patterns and the locations of wetlands and reservoirs.
