Elevation: High - 512.2 ft
Low - 1 ft

EXPLANATION

The map shows the natural and developed areas of Old Lyme, Connecticut. The natural areas are delineated by interpreting the 10-foot contour lines and hydrography. These areas are numbered sequentially beginning upstream and proceeding downstream. The developed areas include streets and buildings, which are indicated on the map.

DATA SOURCES

The map is based on the following data sources:

- University of Connecticut derived from Connecticut's 2000 statewide College of Agriculture and Natural Resources, Center for Land Use.
- Connecticut's 2000 statewide College of Agriculture and Natural Resources, Center for Land Use.

This map is part of regional basin 43, which is part of major basin 4. The drainage basin areas of Connecticut, Nosal, 1977, CT DEP Water Resources Bulletin 15, provide information shown on this map is based on the following digital elevation model (DEM) created by the U.S. Geological Survey (USGS) and other data sources.

The map is part of the University of Connecticut's Natural Drainage Basins in Connecticut study. The map is designed to show the natural and developed areas of Old Lyme, Connecticut, with a focus on the local drainage basins and their relationships to regional and major drainage basins.
