NATURAL DRAINAGE BASINS
MAJOR, REGIONAL, SUBREGIONAL AND LOCAL
SEYMOUR, CONNECTICUT

LEGEND

- Basin Boundary
  - Major Basin
  - Regional Basin
  - Subregional Basin
  - Local Basin

- Local Drainage Basin Direction
  - Outlet Direction
  - Main Stem Drainage
  - Coastal Drainage

Elevation
- 100 - 2,000 ft
- 1,000 - 1,600 ft
- 50 - 999 ft

EXPLANATION

This map shows the natural and topographic extent of major, regional, subregional and local drainage basins within the town of Seymour, Connecticut. The map provides a visual representation of the natural drainage basins, which are defined by the local topography and hydrological characteristics. The basin boundaries are delineated using topographic mapping, which can be affected by the quality and age of the mapping data.

Topographic mapping is not up to date, is inaccurate, or is not detailed throughout the state map of Natural Drainage Basins in Connecticut, 1981. Although basin boundaries shown on the map may not be fully accurate, they provide a general direction of surface water flow within local basin boundary type and identification numbers. Arrows on the map indicate the direction of surface water flow within local drainage basins.
