This map shows the locations and boundaries of natural drainage basins in the State of Connecticut. The shaded relief elevation data used to depict spatial datasets includes Connecticut Local Basin Line and Local Basin Poly. The map is at a scale of 1:24,000 (1 inch = 2000 feet) when printed at its original size (48 x 36 inches). Major, regional, subregional, and local scales can be inferred from the map. The data sources include various state and federal agencies. The map is intended for use in planning and development activities. Additional information can be found in the explanatory text and data sources.
