locations. The exact species or community location falls as a result of comprehensive or site-specific field investigations. Data for both state and federal listed species and critical habitats are based on data collected by the National Diversity Data Base (NDDB). This map is an updated version of the Natural Diversity Data Base (NDDB) and provides information on wildlife habitat conditions and related data.

EXPLANATION
This map depicts general locations of state and federal listed species and critical habitats within the town of Columbia, Connecticut. The map is based on data collected by the Natural Diversity Data Base (NDDB) and provides information on wildlife habitat conditions and related data. The map includes detailed information on various habitats, species, and conservation areas within the town.

DATA SOURCES
\*NDDB Database - A comprehensive set of data compiled from various sources, including field surveys, scientific reports, and other relevant studies. This database provides a wealth of information on wildlife habitat conditions and related data.

\*NDHD Map - Based on data compiled from the Natural Diversity Habitat Database (NDHD), a digital database that includes detailed information on wildlife habitats within the town of Columbia.

\*NDHD Data - Based on data compiled from the Natural Diversity Habitat Database (NDHD), a digital database that includes detailed information on wildlife habitats within the town of Columbia.

NDHD Map Data - The map depicts general locations of state and federal listed species and critical habitats within the town of Columbia, Connecticut. The map includes detailed information on various habitats, species, and conservation areas within the town.
