The Natural Diversity Data Base (NDD) is a digital database that contains information on plant and animal species, as well as their habitats, in the state of Connecticut. The database is used by conservationists, scientists, and the public to protect biodiversity and understand the natural history of the state.

**Legend:**
- State and Federal Listed Species
- Critical Habitat
- State Boundary
- County Boundary
- Town Boundary
- Interstate
- US Route
- State Route
- Ramp
- Street
- Ferry
- Railroad
- Watercourse
- Intermittent Water
- Dam
- Sewage Pond
- Water Tank
- Dredged Channel
- Aqueduct
- Inundated Area
- Intermittent Water
- Rocks
- Unscanned Area
- Marsh
- Cranberry Bog
- State Plane Coordinate System of 1983, Zone 3526
- Protect from light and moisture

**Data Sources:**
- 1991-92 Quadrangle Topographic Maps
- 1988 LIDAR dataset
- 1992-95 Aerial photography
- CDBG-DR Grant Data
- CDBG-DR Grant Data
- Connecticut Department of Environmental Protection 1994-1995 GIS data
- Connecticut Department of Transportation
- Connecticut Game and Fish
- DEEP, Bureau of Natural Resources, Wildlife Division
- FAA WIT
- NEON Project
- State Plane Coordinate System of 1983, Zone 3526

**Estimation:**
- The database is used to estimate the number of species and their populations in the state. It helps in identifying areas of high biological diversity and prioritizing conservation efforts.

**Use of the Database:**
- The database is used by various agencies, including the Connecticut Department of Energy & Environmental Protection, to develop conservation strategies and manage natural resources.

**Limitations:**
- The database is subject to errors and limitations, such as outdated data and incomplete records. It is important to consult with experts and use multiple sources of information to get a comprehensive understanding of the natural history of the state.
