GLACIAL AND POSTGLACIAL DEPOSITS

LISBON, CONNECTICUT

EXPLANATION

This map shows the surficial deposits in Lisbon, Connecticut. The deposits are color-coded to represent different types of deposits, such as glacial ice-land deposits, glacial meltwater deposits, and fine deposits. The map also includes a legend that explains the symbols used for each deposit type.

DATA SOURCES

SURFICIAL MATERIALS - Data are from the Surficial Material Poly dataset, which is a digital spatial data set that shows the areal extent and subsurface grain-size (textural) distributions of surficial deposits in Lisbon, Connecticut. This data set is part of the Connecticut DEP's GIS database and is available for download on their website.

USGS - Data are from the USGS, which provides a variety of datasets related to geology, hydrology, and other natural resources. The Surficial Material Poly dataset is one such dataset that is available for download on their website.

OTHER SOURCES - This map is also available for download on the Connecticut DEP's GIS website, and the Surficial Material Poly dataset is part of their GIS database. This database includes a variety of other datasets related to geology, hydrology, and other natural resources.
