This map is intended to be printed at its original dimensions of 30 x 40 inches (76 x 102 cm) in hydrography, geographic names and geographic places. Streets and water features are not shown on this map. Geologic units are represented by colors on the map, which correspond to the legend provided. These units represent different types of surficial materials, such as glacial deposits, which can vary in composition and age. This map is useful for understanding the geological history and topography of the area.
