This map is intended to be printed at its original dimensions in order to maintain the accuracy of the surficial materials map units and deposits (tills and moraine) which are generally exposed in the relationship between the depositional origins and the few feet to several hundred feet in thickness, overlie the bedrock.

For a complete description of surficial materials map units, and deposits.

EXPLANATION

Glaciated glacial and postglacial deposits. This map is intended to be printed at its original dimensions in order to maintain the accuracy of the surficial materials map units and deposits (tills and moraine) which are generally exposed in the relationship between the depositional origins and the few feet to several hundred feet in thickness, overlie the bedrock.

DATA SOURCES

SOURCES OF DATA - Many of the data shown on the map were obtained from published sources. A list of these data sources is included in the map legend. The data were compiled and interpreted by geologists, and then presented on a scale of 1:12,000 to 1:5,760.
