Surficial Materials
Glacial and Postglacial Deposits
Windsor Locks, Connecticut

Explanations

Glacial and postglacial deposits are shown in map form. The map illustrates the distribution of different types of surficial materials in the area. The map uses a color coding system to represent various materials, such as till, outwash, and drift deposits. This helps in understanding the geographical distribution of these materials across the region.

Data Sources

The data used to create this map includes various sources, such as geological surveys, aerial photographs, and field observations. These sources provide a comprehensive view of the surficial materials in the area. The map is intended to be a useful tool for researchers, planners, and policymakers in understanding the geological features of the region.

Map legend:

- Till: Dark gray
- Outwash: Light gray
- Drift deposits: Various shades of green and orange
- Other surficial materials: Various other colors

Note: The map is generated using a GIS software tool and is intended for educational and informational purposes. It may not be suitable for detailed engineering or construction work.
