This map is intended to be printed at its original dimensions in order to maintain its fidelity. It is designed to show the surficial materials of Woodbridge, Connecticut, with a focus on glacial and postglacial deposits. The map includes a color key for different types of deposits and an explanatory legend for understanding the symbols used. Additional data sources include the Natural History Survey, USGS, and others, providing a comprehensive view of the geology of the area.

DATA SOURCES
SURFICIAL MATERIALS - Maps of materials shown on base maps of Connecticut are derived from an initial compilation of surficial deposits produced by the National Cooperative Geologic Mapping Program. The map data is based on the Connecticut State Geological and Natural History Survey, the US Geological Survey, and other sources.

BASE MAPS - Based on a variety of sources, including USGS topographic quadrangle maps, this map provides a base for the surficial materials data. It includes other geographic features and can be used in conjunction with the surficial materials data.

OTHER CONSIDERATIONS - This map is designed for use in a digital format and can be downloaded in various formats, such as PDF or KML, for further analysis or mapping projects. It is important to consult the map's legend and data sources for a complete understanding of the information presented.
